

RoHS compliant

Features

- Ceramic brazing sealed technology guarantees no risk of arc leaking and ensures no fire or explosion.
- Filled with gas (mostly hydrogen) to effectively prevent the oxidation burnt; the contact resistance is low and stable, and contact part can meet IP67 protection level.
- Carrying current 300A continuously at 85°C.
- Insulation resistance is 1000MΩ(1000 VDC), and dielectric strength between the coil and contacts is 3.3kV, which meets the requirements of IEC 60664-1.

Notes: 1) Unless otherwise specified, the temperature of electrical endurance is at 23°C and the on-off ratio is 0.6s:5.4s.

The coil was not connected to the surge suppression device during the test. Please note that the use of a well-connected diode will greatly increase the release time of the relay, resulting in a reduced lifetime.

2) Ambient temperature is at 85°C and cross section area of wire is 100mm² min. See Fig. Endurance Capacity Curve for more information.

CHARACTERISTIC CURVES

Endurance Capacity Curve

Notes:

1. The upper limit of safe operation temperature and functional temperature are set for 180°C and 130°C respectively.
2. To maintain the maximum long-term operating performance, absolute temperature should not exceed 130°C.
3. The data above is measured at the environment temperature 85°C with cross section area of wire $\geq 100\text{mm}^2$.
4. When the current is $\geq 2500\text{A}$, the relay is likely to be welded, but without any fire or explosion.

CAUTIONS

1. In case of loosening, please use washer when mount the relay with M5 screw, and the torque within 3N·m to 4N·m; The screw tightening torque at terminals shall be within 6N·m to 8N·m. The torque beyond the range may cause damage.

| Mounting for load terminal | | | | Relay mounting | |
|----------------------------|--------------------|-----------------------------|-----------------------------|----------------|--------------------|
| Mounting way | Torque requirement | Hole dia. of copper bus bar | Thickness of copper bus bar | Mounting way | Torque requirement |
| M6 crew | 6N·m ~ 8N·m | Ø6.0mm~Ø6.5mm | 3mm | M5 Screw | 3N·m ~ 4N·m |

2. Be careful that oils and foreign matter do not stick to the main terminal part and please use the wire with min. cross section area 100mm², otherwise the terminal parts may have abnormal heating.

3. The recommended thickness of copper bus-bar is 3mm, otherwise it may cause screw loose or can not guarantee a tight mounting.

4. Cautions of Relay Mounting:

Unrecommended method

The hole of mounting plate at customer-side is too large.

Recommended method

The hole in mounting plate at customer-side is M5

When use M5 screw, the thickness and strength of the washer needs to be guaranteed or it may deform and burst the cover.
